¹May include protection of these vegetation types in dredger tailings land cover type.

²Applies only to emergent wetlands that support giant garter snake habitat. Each acre of protected emergent wetland may be substituted for 10 acres of rice land supporting snake habitat.

³Applies only to managed wetlands that support greater sandhill crane foraging habitat. Each acre of protected managed wetland may be substituted for each acre of rice land supporting crane habitat. Includes acres of managed wetlands or seasonally managed wetlands that would need to be created to replace protection of rice land.

⁴Targets are not established by CAZ. This target may be achieved through protection of stream channels in any combination along Pine Creek, Rock Creek, Mud Creek, Big Chico Creek, Lindo Channel, Little Chico Creek, Butte Creek, and Little Dry Creek.
