APPENDIX A. COVERED SPECIES ACCOUNTS

Note to Reviewers: This appendix contains species accounts that describe the life history, distribution, and status of the proposed covered species. This information will be used to conduct the assessment of impacts of covered activities on covered species and to develop appropriate conservation measures to address impacts and conserve the species. Accounts are provided for 38 species anticipated to be proposed for coverage under the Butte Regional HCP/NCCP. Recorded CNDDDB occurrences and distribution of designated critical habitats for each of the species are provided in separate map figures in the species accounts. To conduct the impact analysis, species habitat models will be developed to identify the distribution and extent of species habitats within the planning area. Following completion and application of the models, the species distribution maps for the planning area will be revised to include the modeled species habitat distributions.
